

# Order Form for 1.35-Volt PX640 Mercury Cell Replacement Adapter

These adapters were originally designed for the Asahi Pentax Spotmeter 1/21, and are also verified to function with the Pentax Spotmeter III. These are the only spotmeters in which the unit has been tested. Any application with a metal-sided battery well for one PX640 1.35-Volt mercury cell should accept this adapter. Read the installation guide on this website first, and email me with any other specific questions at [snowleop@sover.net](mailto:snowleop@sover.net) . If you buy an adapter, and it doesn't fit your application, I will take the unit back and refund your cost, but not the shipping postage to send it to you.

If you have a different application, and you'd like the unit modified a bit for your specific use, contact me by email, and I'll see what I can do. Included with each adapter is one lithium CR1632 coin cell, and an installation guide (the same one that's posted on this website). Shipment is in a bubble-padded envelope. I'll get your order in the mail by the next business day. Shipping is through the Postal service. If you want an email confirmation of when your order was received and when it ships, then include your email address. I promise not to use it for anything but this confirmation.

Number of adapters (maximum of 2 please)      ⇒ \_\_\_\_\_

Price of each is \$30 U.S. dollars x quantity      ⇒ \$ \_\_\_\_\_

Number of extra CR1632 coin cells      ⇒ \_\_\_\_\_

Price per extra coin cell \$1.25 x Quantity      ⇒ \$ \_\_\_\_\_
